Fatherhood Today Magazine | 50 million fathers report needing helps.

Respect for Fatherhood in our culture

The social decline of strong parenting

## Fatherhood Today Magazine

**T**oday, there are approximately 80 million men in the US and Canada who are fathers or will be fathers in the next 5 years

Over 80% of US fathers feel they need help on fatherhood issues; 75% of those do know where to get quality help.

There are dozens of fine US organizations (mostly independent non-profit) working in this area, but they are mostly local churches or strictly policy based. None, by themselves, is big enough or connected enough to ‘move the cultural needle’ on fatherhood - or even get close - in the face of the cultural forces pushing in the other direction

There is no overarching cooperative strategy that might allow these organizations to multiply their impact through coordinated action.

Over half of the global children born today will live some or most of their lives as minors without fathers.

America is quickly becoming a two-tier society, with over 1/3 of our children consigned to almost third world status in terms of mental and physical health, academic attainment, and income.
